

Inbound API

Inbound SMS messaging allows you to send and receive SMS messages with your customers right from your own designed platform. Integrate Two-Way Communication with your system through the Inbound API.

Inbound SMS Request:

This API provides HTTP solution for Incoming messages.

<https://1s2u.com/sms/vn-api.asp?vn=1234567890&username=demo>

Sr. No	Parameter	Description
1.	vn	Your virtual number
2.	username	Your 1s2u username
	Error Code	'00' Invalid user name. '01' Invalid virtual number

Response:

In case of successful, inbound messages information will be given in response body in JSON format.

The API will push only today received messages, you can save the log for your old messages at your side, or you can check our portal for all the received messages within 30 days only. The messages which is older than 30 days will be deleted from our servers for security purpose.

In case of success:

```
{ "results ":[  
{  
  "id":"xxxxxxxxxxxxx",  
  "from":"xxxxx",  
  "date":"xxxx",  
  "text":"xxxxxx"  
}  
] }
```

Response nodes:

1. Id → The ID of the message.
2. From → the phone number that this inbound message was sent from.
3. Date → Timestamp representation of message timestamp.
4. Text → the message body for the inbound message.
